

Geospatial Research & Solutions presents
Wednesday, March 15th
ASU Memorial Union 221

- 1 – 4 pm Network with Geospatial Practitioners**
- 2 – 3 pm Panel: Geospatial Careers**
- 4 – 5 pm Panel: Drones in Research**

Geospatial technologies such as GIS, GPS, drones and satellite data are currently used in almost every professional field. Whether you use geospatial technologies in your current work/ research or want to learn more about how they are used by researchers and professionals in a variety of fields, this event is for you.

Want to meet the up-and-coming geospatial professionals? Come to ASU! Educate students on how your organization uses geospatial technologies and the types of people you want to employ. Then sit back and wait for the qualified candidates to come knocking on your doors.

Looking for ways to get your name out? Employers that participate in career fairs develop strong relationships with ASU and help guide qualified students to your organization. This helps drive more awareness to your organization and the type of work you are doing.

Meet in person: A major benefit of the career fair is the opportunity to meet potential candidates in person from the start. This saves time and money and allows you to give extra attention to strong candidates.

Network within the geospatial realm: This is the perfect opportunity to network among your colleagues or other organizations using geospatial technologies for something new or unique.

Over 40 organizations from city, county, state and federal government as well as the private sector, utility, military installation and tribal groups will be represented at this event, all of whom are avid users of geospatial technologies and your future employers/partners.
